Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  782
                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (25-APR-2002) Maize Mapping Project, University of Missouri, Columbia, MO 65211, USA

If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TICR, www.tlgir.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of t maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowas State, then clones may be requested from ZmDB:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AY111032

                                                                                                                                                                                                                                                                                                                                                                                                       were harvested at the breaker stage (first sign of lycopene accumulation on the blossom end of fruit). Fruit were cut in half and the seeds and locules were discarded prior to freezing the pericarp."

Site 2: XhoI, supplier: Boyce Thompson Institute;
sequencing: The Institute for Genomic Research. Frui
were harvested at the breaker stage (first sign of
lycopene accumulation on the blossom end of fruit)
were cut in half and the seeds and locules were disc
prior to freezing the pericarp."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        were derived from reverse transcription of mRNA samples from seeds at different stages of germination and seedlings at early phase of growth under chilling stress (13oC/10oC). The mRNA pool was used as template for double stranded cDNA synthesis using the Stratagene Uni-Zap XR cDNA synthesis and library king A total of 150,000 phages were excised from the primary library as pBluescript phagemid clones. Enrichment of the primary excised library in the primary excised library was passed in the primary excised library excised library in the primary excised library excised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              with chilling-induced transcripts was performed by hybridizing the primary excised library colony lifts with the PCR-select subtraction product, with cold germinated CDNA as tester and control temperature-germinated cDNA as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone lib="Rice cold stress germination cDNA library" /note="Organ: seedlings; Vector: Lambda Uni-Zap XR excised as pBluescript; Site 1: EcoRI; Site 2: XhoI; The cDNAs
